

SymetriQ Cloud Readiness Assessment

*“By 2012, 20 percent
of businesses will own
no IT assets”*

– Gartner

SymetriQ offer a comprehensive ‘Cloud Readiness Assessment’, which can identify how you can best make use of Cloud Computing technologies. Working closely with you and utilising our in-depth knowledge of Cloud technologies, **SymetriQ** can help you to develop a plan using proven project management methodologies. This approach will maximise benefits and avoid any potential pitfalls.

symetriQ

Workshop

During the workshop phase, SymetriQ consultants work closely with your management and IT teams to help you assess your current situation. By understanding your current challenges and goals, together we can determine objectives and initial steps that can be taken towards a Cloud-based solution.

Assessment

Based on information gathered during the workshop phase, along with a comprehensive investigation of the current environment, SymetriQ consultants will assess applications to determine the most likely candidates for a move to the Cloud. This assessment will be based on in-depth analysis of applications and platforms currently in use. These will be assessed against criteria outlined by SymetriQ consultants based on real-life experience of Cloud projects.

Report

Findings from the Workshop and Assessment phases will be presented in a detailed report.

This report will include the following:

- Identify applications which would bring the most benefit from a move to the Cloud
 - Provide a roadmap for moving other applications to the Cloud
 - Provide quantifiable benefits, over a three to five year period (TCO/ROI)
 - Outline additional benefits
 - Highlight potential issues
-

Pilot

The final part of the assessment process is a pilot project, running on the SymetriQ Cloud. This project will be based on one of the applications identified in the report. SymetriQ will assign a project manager to work with the customer during the pilot project. The pilot project will last a maximum of three months.

At the conclusion of the pilot project, the findings will be compared with the benefits outlined in the report. If successful, the pilot project can easily progress to become a 'live' project.

Pricing

£2500 + VAT Please contact SymetriQ for full details of this package.
