

# SymetriQ Outsourced Software Development

*“UK Companies can  
make savings of  
40% to 59% through  
Outsourced Software  
Development ”*

– Information Week

**SymetriQ's** Software Development arm have been working on successful projects for clients across EMEA for over seven years. We develop tailor made software based on specifications from the client. We have an established development team in the Ukraine which is supported by staff in the UK and project managed in the UK. **SymetriQ** can bring top-class developers, as well as considerable cost savings to any software project.

**symetriQ**

# What We Offer

We offer three types of service:

- Set Build
- Flexible Build
- Long Term Outsource

**Set Build** and **Flexible Build** projects usually have a duration of less than five months, quoted at a fixed price for defined Waterfall projects. This is a sequential lifecycle project based on progressive stages until delivery is reached. SymetriQ use Prince2 Methodology to manage these projects although are happy to adopt clients internal Project Management Methodologies. Alternatively, an estimated number of iterations and iteration cost for agile projects, which are a family of development processes, including SCRUM and XP can be used.

**Long Term Outsourcing** projects will last for over five months, and will be managed as an outsourcing service allowing the client to benefit from our experience in Development, Project Management, Testing and Recruitment. In most Long Term Projects the SymetriQ team will be shaped to fit directly in to the client organisation.

## Technology

- Secure Linux based VDI technology
- Microsoft offering also available
- Runs on SymetriQ's secure, UK based Public Cloud
- Access from anywhere via secure connection
- 50GB of fast local storage free with each VDI session

## Technologies

## Benefits

- 40%+ Cost Reduction
